Continuation of 5. does NOT place the application in condition for allowance because: In response to applicant's argument that Weil does not disclose a sheath that can be expanded from its relaxed position but a sheath that is contracted from its original position, since a relaxed position is a relative term, the contracted state can be considered as the 'relaxed position' and when the contracted state expands to the original position, the sheath is clearly capable of expanding from its 'relaxed position'. Also, a relaxed configuration and expanded configuration are conditional parameters concerning the use of the sheath, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). The claim requires that the strucutre of the sheet is to be elastically deformable in order to be expanded from its relaxed configuration and Weil discloses that the sheet is elastically deformable in col. 2 lines 63-65, therefore, Weil discloses a sheath that can expand from its relaxed configuration .
